
Question
When I execute a command line tool in Release 2014-A or later, it either does not work or an error message is displayed stating that the environment variables DSPACE_CONFIG or DSPACE_ROOT are not set.

How can I solve the problem?

Solution
As of Release 2014-A, all dSPACE command line tools must be executed in the command prompt for the respective installation set.

In most cases, this is the Command Prompt for RCP and HIL, which can be opened via the Windows Start menu.

However, it might also be necessary to use the Command Prompt for Firmware Manager (for FwManagerCmd).
